

Kaspersky® Open Space Security

Why?

Open Space Security

- › Unmatched anti-malware protection
- › Small footprint for fast performance
- › Comprehensive management and reporting
- › Easy to install, easier to manage

**Kaspersky®
Open Space Security
Release 2**

KASPERSKY lab®

Kaspersky® *Open Space Security*

Kaspersky Open Space Security is our approach to protection at every level of the business network, from gateways to workstations; and extending beyond the workplace to reach remote users and an increasingly mobile workforce. At Kaspersky Lab we believe that freedom and flexibility in business communications is fully compatible with airtight protection from contemporary security threats such as web exploits, rootkits and other malicious programs, hacker attacks, spyware and spam.

Our solutions provide premium protection where your business happens, with a simplified way to easily manage your endpoints whether they are inside the network or out. Whether at work, at home or on the road, you'll benefit from world-class Internet security solutions from Kaspersky Lab.

Protection

Our solutions provide unmatched malware detection, and removal and protection from both known and unknown "zero-day" exploits. Our protection is customizable, based on individual roles, locations or both.

Performance

Our solutions stay current without bringing endpoints and your business to a crawl, with the smallest possible client footprint for fast performance. Frequent, small updates help keep your bandwidth open and clear, and you get better mail and web performance because spam and malware are stopped at your perimeter.

Manageability

Get a single view of your business-wide security situation with a simple and intuitive interface for managing security across the network down to an individual device. Set and enforce security policies on the devices employees use wherever they go. And get real-time security information delivered the way you want it.

Simplicity

With Kaspersky, you get security that's simple to install, no matter what the device. With simplified ways to automatically update protection at any endpoint as soon as it re-connects to the network. Our solutions are easy to install and easier to manage!

Total Space Security

Provides integrated protection for business networks of any size or level of complexity. Kaspersky Total Space Security gives you control over all incoming and outgoing data including email, web traffic and all network interactions. The solution includes protection for workstations and mobile devices, ensuring users secure and fast access to business data and other resources, the Internet, and secure email communications.

Product Highlights

- Integrated protection from viruses, spyware, hacker attacks, and spam at all levels of the corporate network— from workstations to Internet gateways
- Proactive protection from the newest malicious threats
- Protection for mail servers and file servers
- Real-time scanning of web traffic (HTTP/FTP)
- Quarantine of infected workstations and blocking of virus epidemics
- Centralized reporting on system status
- Broad scalability

Additional Features

- Centralized installation and administration
- Support for Cisco® NAC (Network Admission Control)
- Support for hardware proxy appliances
- Intelligent redistribution of resources during full system scans
- Personal firewall with IDS and IPS
- Protection from phishing and spam attacks
- Roll back of malicious changes made to the system
- Self-defense technology from malicious programs for the anti-virus solution
- Full support for 64-bit platforms
- Automatic updating of databases

Available Products

- Workstations
- File Servers
- Mail Servers
- Anti-Spam
- Mobile Security
- Management

Kaspersky® *Open Space Security*

Enterprise Space Security

Protects all endpoints including workstations, file servers and mail servers from today's Internet threats, including viruses, worms, spyware and phishing, ensuring a free flow of information within the company and secure communications with the outside world.

Product Highlights

- Protection for workstations and servers from viruses, Trojans and worms
- Protection for mail servers such as Sendmail, Qmail, Postfix and Exim
- Scanning of all messages transmitted via Microsoft Exchange servers
- Scanning of messages, databases and other objects on Lotus Domino servers
- Protection from phishing and spam attacks
- Blocking of virus epidemics
- Scalability

Additional Features

- Centralized installation and administration
- Support for Cisco® NAC (Network Admission Control)
- Proactive protection from malicious programs
- Personal firewall with IDS and IPS
- Complete protection while connected to WiFi networks
- On-the-fly scanning of web traffic
- Roll back of malicious changes made to the system
- Intelligent redistribution of resources during full system scans
- Quarantine of infected and suspicious objects
- System for reporting on system status
- Automatic updating of databases

Available Products

- Workstations
- File Servers
- Mail Servers
- Management

Business Space Security

An umbrella of protection for Linux and Windows workstations and file servers from all types of viruses, Trojans and worms, preventing epidemics, keeping information secure and fully accessible to network users. This product was designed specifically to meet the increasing demands of heavily utilized servers.

Product Highlights

- Proactive protection from even the newest malicious programs
- On-the-fly scanning of email and web traffic
- Personal firewall with IDS and IPS
- Protection when working on any type of network, including WiFi
- Self-defense technology from malicious programs for the antivirus solution
- Quarantine storage of suspicious objects
- Automatic updating of databases

Additional Features

- Centralized installation and administration
- Support for Cisco® NAC (Network Admission Control)
- Integrated protection for workstations and file servers from all types of Internet threats
- iSwift technology prevents superfluous repeat scans of data within the network
- Load balancing between server processors
- Quarantine of infected workstations
- Roll back of malicious changes made to the system
- Scalability

Available Products

- Workstations
- File Servers
- Management

Kaspersky® Open Space Security Protection

Kaspersky's solutions suit the needs of your organization. Whether it's protection for workstations and file servers, or mail and gateway protection, you will find exactly what you need to ensure the security of your environment both on the network and outside the office.
